March 31, 1999 **JP1999000093849**

**Problem to be solved:** To easily refer to and edit a file stored in a digital camera without the need for installation of a specific application to a PC.

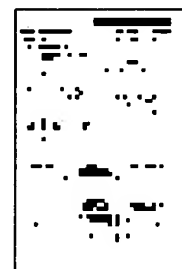

**Solution:** A JPEG file stored in a memory built in a digital camera 30 is used to automatically create a thumbnail HTML document. A JPEG display part and a file name are linked to the HTML document displayed with the original resolution. The index HTML document is automatically generated from the JPEG file name in the memory to generate the HTML document with operations capable of basic operations with respect to files in the memory. A CGI capable of various operations is inserted in an in-line in the HTML document as the operation, and the HTML document including thumbnail display, index display and operation display is displayed at once as a multiple frame display.
